

Description:

The information release App is a supporting application software for the paperless conference system. It allows the participants in the conference waiting room to keep abreast of the conference process and prepare for the conference well. After entering the software, the software interface will automatically turn pages to display the list of topics, progress and corresponding personnel information of the entire conference. When the conference administrator click "start" or "prepare" on the topic management interface, the corresponding prompt page of "start" (or "prepare") will be displayed on the waiting screen in real time, and voice broadcast is supported.

Feature:

1. Display the list of topics, progress and corresponding personnel information of the whole meeting in a rotating manner by automatically turning the page.
2. Display the status of the meeting topics, with topic start, ready to start prompts and voice broadcast reminders.
3. With topic start prompt and status display.
4. With ready to start prompts and status display.
5. With the function of keeping the information related to the confidential meeting confidential, without broadcasting the content of the issue.
6. You can set the default meeting room and automatically enter the meeting room after setting.
7. Support the scrolling effect of issue title rotation, and the scrolling time can be customized.
8. Support binding different meeting rooms between different servers, support up to 4.
