

## Description:

The information release App is a supporting application software for the paperless conference system. It allows the participants in the conference waiting room to keep abreast of the conference process and prepare for the conference well. It can display the information such as 7-day conference appointment data and conference host information, and includes the status of not started, started, and in process. When the administrator clicks "start" on the paperless conference management interface, the information on the conference screen will be displayed in the ongoing conference.

## Feature:

- \* Support viewing historical conferences of the conference room within 7 days.
- \* Supports viewing the status of the meeting, including not started, preparing, and in progress.
- \* Support the display of ongoing conference.
- \* Support viewing the seat map of participants.
- \* Supports QR code sign-in.
- \* Support server-defined information notification time.
