

Description:

The APP software is subordinated to a functional module of the paperless conference system. It is mainly used to receive the service demands from the paperless conference terminal.

Feature:

- * Support log-in and management through the secretary account and administrator account of the paperless system. The administrator can view all service demands, while the secretary can only view the service demands created by himself.
- * The software can view the real-time service demands from the paperless terminal so that the service personnel can process them in time.
- * Support searching for the conference service demands from the paperless terminal according to conference room, conference status and date.
- * Support searching for finished and unfinished conference service demands.
- * The APP can receive the reminder of the service demands in real time.
- * Support viewing the new service demands on the APP, and the number of demands will be also prompted.
- * Support deleting finished or expired data.
- * The software supports the phones of Android 5.0 and newer version, and can be downloaded in various application markets.
