

Description

AI simultaneous interpretation terminal software is a subtitle transcription software installed on Android 7.1.2, Harmony 2.0 and above, and supports real-time subtitle display, screen design and other functions. Support display of single, double, and three lines of text and full-screen display. Support editing subtitle display background, text color, transparency, customized LOGO, etc.

Description

- * The screen supports the display of voice-transcribed text content in the form of floating subtitles. Support setting the font size of LED display subtitles. The subtitle position supports docking up and down. Support four display styles: single line, double line, three lines, and full screen.
- * Support customizing the font color and font transparency of transcribed text, untranslated text, and character name text. Support the display and hiding of custom Logo, and support custom logo images.
- * Support adjustment of subtitle background color and background color transparency, and support customization of full-screen projection background color or background image replacement.
- * Support customizing the transparency setting of the full-screen background. Support modifying the font color and transparency of the meeting name.
- * Support floating window/full screen bilingual display.
- * Support text and voice playback of translated content.
