

# 16-channel Video Input Card

## TV-8016CR

### Description:

The 16-channel video input card can convert the composite video signals output by graphics devices such as DVD into digital signals and send to the processor through a high-precision analog-to-digital conversion chip. It supports NTSC/PAL system adaptive, and scaling and optimization of the input signal, so as to achieve the desired viewing effect. Simple modular card design facilitates users to integrate into the existing system quickly.

### Feature:

- \* Support NTSC/PAL/SECAM system adaptive (NTSC and PAL cannot be plugged at the same time).
- \* Support 4-split and single screen display modes.
- \* A single card supports 16 channels of video inputs.

### Specification:

Model	TV-8016CR
Input interface	DB15 interface*2 (converted to 8-channel BNC connector through an adapter cable)
Video system	NTSC/PAL/SECAM
Signal level	1Vp-p
Impedance	75Ω
Resolution	720*480(NTSC); 720*576(PAL)
Video input channel	16
Power consumption	20W
Temperature	0~50°C (working environment), -55~70°C (storage environment)
Humidity	10%~80% (working environment), 10%~90% (storage environment)
Board type	Blade card
Net weight	0.3kg
Dimension	203*224*20mm
