

Description

Used to connect the RF signals from two antennas to a single input.

Feature

*Broadband design provides high isolation within the application frequency range to prevent signals from interfering with each other.

*In the system, this coupler facilitates switching and installation.

*Multiple sets of couplers can be used to expand the coverage area.

*The coupler supports the function of isolating noise in the line and preventing self-excitation.

Specification

Frequency Range	470-950MHZ
Insertion loss	≤-7
Isolation	≥15dB
Characteristic impedance	50Ω
Port type	BNC
Dimensions (L×W×H)	79×60×26mm
weight	0.2kg
