

Description

The software runs on the Android operating system and can be installed on Android phones or Android tablets; the software supports meeting creation, starting sign-ins during meetings, voting, switching microphones on and off, audio adjustment, microphone lifting, and turning off wireless units, etc.; suitable for various conference venues .

Description

*The software runs on the Android operating system and can be installed on an Android phone or Android tablet.

*It supports Chinese or English versions, and can be selected according to user needs.

*It supports users to initiate meeting sign-in through Android phones or Android tablets during the meeting, which is not restricted by scenes or locations, and is flexible and convenient.

*It supports users to initiate meeting voting through Android phones or Android tablets during the meeting, save voting records, and create different voting, such as satisfaction, elections, ratings, custom voting, etc.

*It supports sign-in, voting record export document function, and supports common document formats (doc/docx/xls/xlsx/ppt/pptx).

*It has a microphone list module, which supports adjusting microphone sensitivity, adjusting microphone EQ, adjusting microphone switch, switching microphone speaking mode, etc. by searching or filtering microphone information (microphone type, microphone identity).

*The software has the function of displaying the power of wireless microphones, which can detect the power of microphones in real time, and provide icon prompts when the microphone is low in power.

*It supports controlling the one-key shutdown of the wireless microphone unit and controlling the lifting and lowering of the microphone unit.

*Support receiving conference microphone calls for tea, paper, pen and other service needs, and the mobile phone APP or tablet has a pop-up window display; after calling the service, the waiting status is displayed, and the status is completed when the logistics service personnel complete the processing.

*Support receiving conference microphone speaking applications, and the software can be used to agree or reject the speaking application of the participants.

*The software has the function of customizing the background color switching and startup page, with five background style themes of light red, blue, green, dark red and purple, which can be switched freely.

*Support setting APP account permissions, and open corresponding functional modules according to actual needs (including microphone switch, EQ adjustment, in-meeting sign-in voting, speech mode switching and other functions).
