

Description

New Conference Recording Software is a computer software designed for conference recording in the context of meeting speeches. It can record individually and in batches for conference microphones, and can also record the mixing audio of the third-generation digital conference server (except for the interpreter machine). It can save the recording file in WAV audio format, and permanently save it to the computer hard disk.

Feature

- * Support the configuration of the storage address of the recording file, and the storage address of the recording file can be opened directly after the recording is over.
- * Support start/stop recording operations for all recording units.
- * Support start/pause recording operations for a single recording unit.
- * Support the generation of unit and server recording files, support filtering and querying the recording files in WAV format.
- * Support single addition and batch import of recording units.
- * Support batch deletion of recording units.
- * Support the dynamic display of recording time and recording amplitude of a single recording unit.
- * Support the display of the total duration of the server mixing recording.
- * Support the binding and viewing of personnel related to the recording unit.
