

### Feature:

- \* It supports the detection area drawing including classroom podium and student area, and realizes automatic camera tracking and switching through the recording controller.
- \* It supports the control of the PTZ camera lens and focal length, and realizes automatic camera tracking and switching of teachers and students during teaching activities.
- \* According to the tracking frame drawn in the panorama screen, the tracking area can be framed and only the movement of the face in this area will be tracked.
- \* It supports setting the number of preset positions, close-up width and standing time for teacher tracking. When the blackboard tracking is turned on, the system will switch to the blackboard writing screen when it recognizes someone is in the blackboard tracking frame.
- \* As for the student tracking, it supports setting the vertex width to adjust the details, setting the tracking delay, standing and sitting time, large target threshold, clearing target time, standing height ratio difference and recognition sensitivity.
