

Description

The distributed screen management software of the distributed integrated management platform supports the collection of software interfaces on Windows, encodes the collected data, and then sends the data to the distributed integrated management platform to realize the application software interface to the screen.

Feature:

- * Support simultaneous collection and and projection of 6 application software interfaces .
- * The frame rate and code rate of each application software can be set separately, frame rate support: 5, 10, 15 frames, code rate support: 1M, 2M.
- * Support the software control of distributed integrated management platform by the iPad software(for example, to turn PPT pages and web pages)
- * Support automatic detection of network status, and the software interface shows disconnected status when network is disconnected.
- * Support start and stop projection.
- * Support high brightness display state of software interface after projection.

Specification:

Model	TV-716WR
Support collection process number	6
System environment	Windows 7
Video coding	H.264
Resolution	1080P
Frame rate	5 frames, 10 frames, 15 frames
Code rate	1M, 2M
