

Feature:

- * Support the connection with the access control system and the conference appointment system to realize the synchronization of permission data.
- * Support the setting of the participants' permissions and usage time period to enter conference room through the access control device (card swiping or face recognition, etc.). When the person do not have the permissions or it is not within the authorized time period, he will be prohibited from entering.
- * Support the connection with the access control system to realize that only participants can enter the conference room. When booking a conference room, send the numerical password or QR code of the access control to the corresponding participants; the participants swipe card to pass through the access control device to enter the conference room.
