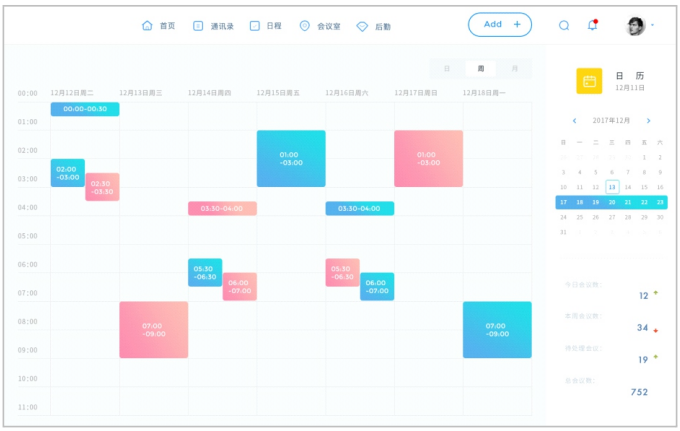
Content Management System Software

TR-0700SM2



Feature:

* Support the management of content management system terminal device; customize the name of the device and the resolution; support automatic scanning of the online devices; device groups can be added for easy management.
* Support remote management of device restart, screen on/off, device volume adjustment, resolution adjustment, and remote screen capture function.
* Support material upload management, built-in transcoding tools, support png, jpg, jpeg, gif image formats; mp4, mkv, wmv, flv, f4v, m4v, rmvb video formats; mp3 audio format, and doc, docx, xlsx, pdf file formats.
* Support one-click material preview, material group copy, quick material positioning and searching, material upload to the shared area, material details viewing, material collection, material popularity ranking, and material citation times.
* Designed with an embedded H5 editor, support adjustment of more than 50 parameters, support multi-layer editing, support basic settings such as main image, title, description; add background music, loading animation, page turning animation, and page background settings (background, template, size, background color).
* Support the import and editing of mainstream components: text, picture, video, map, weather component, marquee, PDF preview.
* Support program group copy, one-click program preview, program save to the shared area, program details viewing, program collection, program popularity ranking, and program citation times.
* Support web-side sharing of program links to mobile terminals, and mobile-side sharing programs to third-party software such as WeChat, QQ, and DingTalk.
* Support multiple playback modes such as timed playback, idle playback, and insert playback; support multiple playback methods such as offline playback, online playback, and buffer playback; support the unfinished program withdrawal function.
* Support program review function, and automatically notify the previewer after the program is submitted.
* Support information tracking and management function, view the remaining memory status and the available storage status, and support the alarm log export for convenient maintenance and management.
* Support operation log viewing and filtering for convenient maintenance and check.
* The administrator can create multiple roles, and assign corresponding permissions to the roles; role replication is supported.
* Support timed tasks, i.e. perform multiple actions at the preset time: restart, screen on/off, and send timed tasks to multiple devices.
* Support the display of disk usage, RAM usage, and server CPU usage in graphs; support online device statistics, offline device statistics, alarm device statistics, image material statistics, video material statistics, and other data statistics.
