

Speech Transcription Software V5.60

TS-8672R

Description

The speech transcription conference large screen software is a large screen subtitle transcription software installed on the Centos system, which supports real-time subtitle display, large screen design and other functions. It can display single, double, three lines of text and full screen display. You can edit the subtitle display background, text color, transparency, etc.

Feature

- * Supports switching between translated subtitles, transcribed subtitles, and bilingual subtitles.
- * The screen supports displaying voice transcribed text content in the form of floating subtitles, and setting the font size of large-screen subtitles. The subtitle position can support upper docking and lower docking, and supports four display styles: single line, double line, three lines, and full screen.
- * Supports customizing the font color and font transparency of transcribed text, untranscribed text, and character name text.
- * Supports adjusting the transparency of subtitle background color and background color; supports customizing the background color or background image replacement of full-screen projection, and supports customizing the transparency setting of full-screen background.
- * Supports customizing the content of large-screen conference titles and subtitles, and supports customizing font style, font size, font color, and alignment.
- * Supports customizing the content of large-screen text, and supports customizing font style, font size, font color, and alignment.
- * Supports generating QR code images for sharing meeting minutes in the meeting.
- * Supports generating QR code images and sharing meeting minutes and recording files in historical meetings.
- * Supports modifying the font color and transparency of the meeting name.
