

Description

The speech transcription conference subtitle client software is a subtitle transcription software installed on Windows 7 and Window10 systems. It supports real-time subtitle display, screen design and other functions. It can display single, double, three lines of text and full screen display. You can edit the subtitle display background, text color, transparency, etc.

Feature

- * Supports switching between translated subtitles, transcribed subtitles, and bilingual subtitles.
- * The screen supports floating subtitles to display the text content of voice transcription, and the large screen subtitle font size can be set. The subtitle position can support upper docking and lower docking, and supports four display styles: single line, double line, three lines, and full screen.
- * Supports custom font color and font transparency of transcribed text, untranscribed text, and character name text.
- * Supports subtitle background color and background color transparency adjustment; supports custom full-screen projection background color or background image replacement, and supports custom full-screen background transparency settings.
- * Supports hidden subtitle client function. Clicking hide will turn it into a minimized window, and clicking the taskbar client icon to restore it.
- * Supports custom conference name font color and transparency.
- * Supports frosted glass display effect, making the visual effect of subtitles clearer, more beautiful, more scene-based, and more visual.
- * In the floating subtitle state, it supports displaying the speaker avatar icon.
