

Description

The speech transcription conference sound card acquisition software is an audio software installed on the cent os 7.7 system. It can collect audio through the USB interface of the server to realize the speech transcription function.

Feature

* Using this sound card acquisition software, instead of the physical encoder software and digital conference server, can reduce the actual physical space and save the use cost.

* It is easy to operate. After connecting to the server, bind the connected microphone to directly capture the audio of other input devices to the server, and then transcribe it.
