

Board

VA-6501P (Specification: PP21)

Description

The amplifier power board is used in the amplifier controller cabinet to provide power supply for the amplifier controller cabinet and the boards.

Feature

- * Supply power for the cabinet board;
- * Support the indication of the working status of the board;
- * Support inspection and maintenance without power-off, the enable function on the module is required.
- * Support the use of any board position in the cabinet;
- * Support 2 power boards in 1 cabinet at the same time for redundant power supply.

Specification

Input voltage	AC220V 50/60Hz
Maximum input current	12A
Fuse specification	250V/12A slow type
Output voltage	±85V, +24V
Maximum output current	11A, 3A
Heat dissipation mode	Forced air cooling
Protection mode	Over-voltage, over-current, high temperature protection
Dimension	312.6mm×129mm×60mm
Weight	1.6kg
