

## Description

The configuration tool is used to configure and query the device parameters in the system.

## Feature

- \* Device search: display all devices connected to the network in the device list display area, and the basic information of the devices can be viewed.
- \* System parameter setting: when saving the device parameters, the data is written into the database synchronously, supporting intelligent device distribution network, device parameter import and export.
- \* Device parameter configuration: support setting and configuration of each device parameter.
