

# Telephone Interface Board

## VA-6500C (Specification: CT31)

### Description

The telephone interface board connects the ordinary program-controlled telephone to the PA system, handles the dial-in operation, and performs telephone broadcast to the designated zone according to the user's operation; it also receives dispatching commands, and starts intercom with the remote station (only initiated by the telephone). At the same time, it can self-check its own status and report the working status of the device, such as online status, fault status, etc.

### Feature

- \* Support access to 2 ordinary program-controlled telephones.
- \* Handle call-in operations, and perform telephone broadcast to designated zones according to user operations.
- \* Report the working status of the device: online status, fault status, etc.
- \* Receive dispatching commands and communicate with the remote station (only the telephone can initiate the intercom).
- \* Support plugging and unplugging of any board in the broadcasting cabinet.
- \* Support hot swapping of boards.

### Specification

Model	VA-6500C (CT31)
Number of boards	Only 1
Network interface	RJ45*1, 10/100Mbps adaptive, IGMP, TCP/IP protocol
Telephone line interface	RJ11*2, telecom standard
Dimension	312.6×129×30mm
Weight	0.3kg
