

Description

The client software supports remote operation platforms management such as program broadcasting, audio acquisition and broadcasting, timing programming, broadcasting speech, program library management in the management system on ordinary commercial computers.

Feature

- * Based on Windows common computer platform, the digital portable client software supports system platforms such as Win98~Win8.1.
- * Portable U disk design, easy to carry; USB interface, plug and play, simple operation.
- * The client software uses the network (LAN, WAN) to remotely log in to the server. It supports multiple sets of client software to log in to the server at the same time, and each set of client software works independently.
- * Support remote manual, automatic program playback and paging broadcast, support remote login to the server program library for playback.
- * It can set the timed task to submit to the server for automatic broadcast. Though the mobile client is unplugged, the task can still be executed timely.
- * Support to add audio files to the server remotely, to establish multiple program library files at the same time, and unique management authority.
- * Support terminal program monitoring and environmental monitoring, and automatic recording to the server.
- * With intuitive and humanized operation interface, real-time display of the working status and task volume of the broadcasting terminal, and 5 or more task volume controls.
