

Features:

- * Login: basic user login function, you need to fill in the account password and IP address.
- * Task Manager: view the detailed information of tasks being performed by the system, and support operations such as Previous/Next, Play/Pause, Volume control, etc.
- * Broadcast: select the terminal device that needs to perform the broadcast task in the terminal list, and you can initiate a recording broadcast/general broadcast.
- * Initiate intercom: in the terminal list, you can initiate one-to-one intercom to a single terminal. (Note: It is not allowed to initiate intercom between smart portable terminals)
- * Shortcut function: set voice recognition, voice text input, and the switch to initiate the previous broadcast/intercom (A/B button).
- * My playlist: view the playlist and playlist details, and delete/add playlists.
- * Temporary task: display task name, task description, task picture, play/stop icon.
- * Support music searching and task type filtering.
- * Terminal positioning: perform position marking operations on the terminal; view the distance information of the terminal position, which is used to initiate positioning broadcasts.
- * Beidou positioning broadcast: obtain the nearby terminal list devices, and initiate paging operations directly through Beidou positioning.
- * Voice broadcast: direct natural language input. For example, directly speak: "Initiate broadcast on terminal 12" to initiate a broadcast task on this terminal.
- * Recording broadcast: support local storage of real-time recording files, and support pushing recording files to the broadcast controller for playback.
- * Broadcast room: support the designated terminal playing the recording files, initiating broadcast paging, and searching for historical broadcast records.
- * Media library: support creating music broadcasting tasks for partitions or designated terminals.
