

Feature

- * Login: fill in the SIP account password and server IP address; the account can only be numbers, not letters or Chinese.
- * Homepage: the homepage contains shortcut function, broadcast, intercom, dialing, temporary task, playlist, history records and more functional modules, including one-to-one intercom, one-to-many broadcasting, dial-up calling, voice recognition, terminal positioning, Scan code, etc.
- * Task center: you can view the current playlist tasks and detailed information, and perform operations such as previous/next, play/pause, and volume control.
- * Initiate broadcast: in the terminal list, select the terminal device to perform the broadcast task, and you can initiate a recording broadcast/ordinary broadcast.
- * Initiate intercom: in the terminal list, you can initiate one-to-one intercom to a single terminal. (Note: It is not allowed to initiate intercom between smart portable terminals)
- * Shortcut function: you can set voice recognition, voice text input, and initiate the previous broadcast/intercom (A/B key).
- * My playlist: display and view playlist and playlist details, and perform operations such as delete/add.
- * Temporary task: display task name, task description, task picture, play/stop icon.
- * Support music search and task type filtering.
- * Terminal positioning: support location marking on the terminal; view the location and distance information of the terminal, used to initiate a positioning broadcast.
- * Beidou positioning broadcast: obtain the nearby terminal list, and initiate a paging task directly through Beidou positioning.
- * Voice broadcast: input directly through natural language, e.g. directly speak: "Initiate broadcast to terminal 12" to initiate a broadcast task to the terminal.
