

8-channel Signal Amplifier

TL-SL731

Feature:

- * DMX512 male and female interface input.
- * Input and output photoelectric isolation.
- * 8-channel independent amplification drive output.
- * The signal amplification and shaping function extends the signal transmission distance.
- * Enhance the capability of data bus to connect more devices, protect DMX512 output interface of the lighting console, isolate the faults on site, and improve the safety and reliability of the digital lighting control system.
- * Independent LED signal indication.

Specifications:

Input voltage	AC 110-240V 50/60Hz
Output signal	DMX512/1990 signal
Fixture size (L×W×H)	482×165×44.5mm
Package size (L×W×H)	525×225×105mm
Gross weight	3.5kg
Net weight	2.7kg
