

Feature

- * Double upper and lower limits can be used to realize the secondary protection of the upper and lower limits, or one upper limit and one lower limit can be used as PLC positioning contacts to realize a soft limit and achieve more accurate fixed-point positioning.
- * The driver adopts double brakes, which is easier to maintain and replace than solenoid valve brakes;
- * The safety factor of the gear transmission box is relatively high; especially compared with the WP series batten hoist, it is as high as about 2 times.
- * The driver adopts K77 helical gear transmission box, which features high output efficiency, less transmission energy consumption and more energy saving.

Specification

Rated load	10.0KN
Rated speed	0.02-0.2m/s
Power supply	380V/50Hz
Power	P4/4.0KW
Hoisting points	x hanging points
Positioning accuracy	±3mm
Running noise	≤50dB (A)
Stroke	Customize
Reducer model	KF series
Rope winding form of boom machine	Large drum self-draining rope hoist
Safety measures	Double limit protection, double brake braking, limit protection, messy rope protection, loose rope protection and encoder positioning
Equipment size (L*W*H)	2100*480*1470mm(Depending on the project)
Equipment weight	About 420kg(Depending on the project)
